

3RD PARTY APPS TO OCI

Solution Overview

Seamlessly migrate, integrate, and modernise legacy or ISV third-party applications onto Oracle Cloud Infrastructure (OCI). We reduce TCO, eliminate application silos, and ensure non-Oracle workloads run securely alongside your core Oracle Cloud estate.

Key Differentiators

- **Connected Ecosystem:** We use **Oracle Integration Cloud (OIC)** to connect migrated third-party apps directly into core Oracle SaaS (ERP, CX, SCM).
- **Rapid Modernisation:** If a legacy app is unsupportable, we rapidly rebuild or extend it using **Oracle APEX** and **OCI AI Services**.
- **Enigized Support:** End-to-end guidance from initial landing zone setup through to fully managed cloud services.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Lift & Shift): 1-3 simple apps to OCI standard VMs; basic networking & security landing zone.	3-4 weeks
Medium (Replatform): Up to 5 apps; DB replatforming, basic OIC integrations, setup of CI/CD pipelines.	6-8 weeks
Enterprise (Refactor): Mission-critical apps; Complex OIC Integrations, APEX rebuilds.	10-12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your business objectives, assess your “AS IS” 3rd-party application landscape, and identify opportunities for architectural improvement.
- **Review:** Define the “TO BE” OCI architecture, justify long-term strategy with ROI, develop a roadmap, and agree on Phase 1 delivery.
- **Innovate:** Execute the entire life-cycle (design, implementation, testing, deployment) of the migration, with a focus on seamless change management.
- **Validate:** Assess solution performance, ensure smooth user adoption, and review KPIs to validate the business value of your digital strategy.
- **Evolve:** Expand the cloud solution to unlock additional value and enhance the roadmap based on feedback and market trends.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
