

AI APPLICATIONS ON OCI

Solution Overview

Leverage Oracle Cloud Infrastructure (OCI) AI Services, Generative AI, and AI Agents to automate enterprise workflows, enhance decision-making, and unlock value from unstructured data. We combine embedded Oracle SaaS AI capabilities with custom OCI GenAI models to deliver secure, industry-specific AI solutions.

Key Differentiators

- **Embedded & Custom AI Synergy:** Seamlessly extend out-of-the-box Oracle Fusion AI features (ERP, CX, SCM) with custom OCI GenAI models and enterprise LLMs.
- **Rapid Integration with OIC & APEX:** Embed AI capabilities directly into core business processes and custom low-code **Oracle APEX** interfaces.
- **Enterprise Security & Data Governance:** Protect proprietary business data using OCI's secure, private AI infrastructure and Autonomous Database Vector Search.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (AI Discovery & POC): Deployment of pre-built OCI AI services (e.g., Document Understanding, Language, Vision) or SaaS GenAI enablement for 1 targeted use case.	3-4 weeks
Medium (GenAI & Smart Automation): OCI GenAI models, building custom AI Agents, and delivering bespoke APEX smart user interfaces.	6-8 weeks
Enterprise (Custom RAG & Multi-Agent AI): Enterprise RAG architecture setup, OCI Vector Search, complex multi-agent workflow orchestration, and cross-platform SaaS/OCI integration.	10-12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Methodology

- **Discover:** Understand key business objectives, assess your “AS IS” technology, and identify operational areas ripe for AI transformation.
- **Review:** Define the “TO BE” AI architecture, create recommendations, map out the ROI, and agree on a Phase 1 pilot.
- **Innovate:** End-to-end delivery of the AI solution (design, training, testing, deployment) with a heavy focus on change management.
- **Validate:** Assess the AI's performance and accuracy, review KPIs, and document lessons learned to validate your digital strategy.
- **Evolve:** Expand the AI solution across new business units and strengthen the roadmap as OCI Generative AI technologies emerge.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
