

APPLICATION DEVELOPMENT

Solution Overview

Build, modernise, and extend enterprise applications on Oracle Cloud Infrastructure (OCI). Whether you need to replace legacy software, extend your Oracle SaaS functionality, or build custom web and mobile portals, we deliver tailored solutions quickly using low-code tools like Oracle APEX alongside OCI cloud services.

Key Differentiators

- **Rapid Low-Code Delivery:** We build secure, scalable, and responsive business applications in weeks rather than months using **Oracle APEX**.
- **Seamless SaaS Extensions:** Extend your Oracle SaaS (ERP, CX, SCM) features to meet unique business needs without altering core application code or breaking future upgrades.
- **Connected Architecture:** We combine application development with **OIC** and **Oracle Data Transforms (ODT)** to keep data flowing smoothly between your new app and wider business systems.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Low-Code MVP): Design and build a simple 1–2 workflow business application using Oracle APEX on OCI; includes standard security setup.	3-4 weeks
Medium (Custom SaaS Extension): Feature-rich web/mobile app or Oracle SaaS extension, including basic OIC/ODT flows and automated workflows.	6-8 weeks
Enterprise (Full App Modernisation): Complete modernization of a legacy application or multi-module custom portal with complex OIC/ODT data flows and advanced security.	10-12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Methodology

- **Discover:** Understand your app objectives, assess your “AS IS” operational state, and identify where custom APEX solutions provide quick wins.
- **Review:** Define the “TO BE” application architecture, outline a future-proofed development roadmap, and agree on Phase 1 delivery.
- **Innovate:** Full lifecycle development (UI/UX design, low-code implementation, testing, deployment) focusing on seamless user integration.
- **Validate:** Assess solution performance, gather user feedback for customer adoption, and review KPIs to ensure the app meets business goals.
- **Evolve:** Expand application features to unlock additional value and enhance the software based on user feedback and market trends.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
