

APPLICATION INTEGRATION

Solution Overview

Connect your cloud and on-premises applications to streamline operations and eliminate data silos. Using Oracle Integration Cloud (OIC), we automate end-to-end business processes across your Oracle SaaS applications (ERP, CX, SCM) and third-party software, ensuring your data flows accurately and in real time.

Key Differentiators

- **OIC Specialists:** We use Oracle Integration Cloud (OIC) pre-built adapters to connect systems quickly without writing fragile custom code.
- **Connected Business Processes:** We focus on automating complete business journeys—such as Lead-to-Cash or Procure-to-Pay—across both Oracle and non-Oracle systems.
- **Flexible & Scalable:** Our integration patterns make it straightforward to add new tools or update workflows as your business grows.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Core Connections): 1–3 point-to-point integrations connecting Oracle SaaS with third-party software using standard OIC adapters.	3-4 weeks
Medium (Process Automation): End-to-end automation of a core business process (e.g., Lead-to-Cash) connecting up to 5 systems with custom data mapping.	6-8 weeks
Enterprise (Integration Hub): Complex multi-system enterprise architecture with real-time event processing, custom error handling, and APEX monitoring dashboards.	10-12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand integration objectives, assess “AS IS” data silos, and identify operational changes needed for connected workflows.
- **Review:** Define the “TO BE” Oracle Integration Cloud (OIC) architecture, create technical recommendations, and agree on Phase 1 delivery.
- **Innovate:** Deliver the integration solution (endpoint design, data mapping, testing, deployment) focusing on seamless change management.
- **Validate:** Assess data flow efficiency, ensure systems are properly synced, and document quick wins to validate the integration strategy.
- **Evolve:** Expand API connections to include new third-party systems, enhancing the roadmap as your business ecosystem grows.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
