

FUSION AI AGENT STUDIO ACCELERATORS

Solution Overview

Deploy intelligent AI agents within your Oracle Fusion Applications to automate routine work and streamline complex workflows. Using Oracle's AI Agent Studio alongside OCI services, we configure ready-to-use out-of-the-box agent functions while also building custom agent capabilities to match your unique business requirements.

Key Differentiators

- **Out-of-the-Box & Custom Flexibility:** We fast-track your projects by deploying standard agent functionalities immediately, while creating tailored custom agents for workflows unique to your business.
- **Connected Automations:** Using **Oracle Integration Cloud (OIC)**, we give your AI agents the ability to safely interact with, update, and fetch data across both Oracle and third-party systems.
- **Secure Enterprise AI:** We deploy your agents within Oracle's protected cloud framework, ensuring strict data privacy, proper access controls, and compliance with company policies.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Standard Configuration): Set up and configure out-of-the-box AI agent capabilities for a single Oracle Fusion workflow (e.g., procurement or HR inquiries) with basic tuning.	3-4 weeks
Medium (Hybrid Setup): Configure standard agent features combined with a custom-built agent workflow.	6-8 weeks
Enterprise (Multi-Agent Suite): Full enterprise deployment featuring a combination of standard and custom-built agents handling multi-step processes across complex system estates.	10-12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your automation objectives, analyse your “AS IS” manual workflows, and identify opportunities for AI intervention.
- **Review:** Define the “TO BE” AI Agent architecture, assess ROI on time-savings, and agree on Phase 1 agent delivery.
- **Innovate:** Build the AI solution (prompt design, integration, testing, deployment) with a focus on human-in-the-loop change management.
- **Validate:** Assess agent performance, review accuracy KPIs, and ensure strong user adoption for seamless integration into daily work.
- **Evolve:** Expand the agents' capabilities to unlock additional value, adapting the roadmap to include emerging Generative AI features.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
