

LANDING ZONE BUILD

Solution Overview

Establish a secure, scalable, and compliant foundation on Oracle Cloud Infrastructure (OCI) before you migrate your workloads. We design and deploy your core cloud environment, covering network structure, security rules, identity management, and cost tracking, ensuring your business is ready to operate safely in the cloud from day one.

Key Differentiators

- **Best-Practice Security:** We build your environment strictly to Oracle and industry security standards (CIS Benchmarks), protecting your data right out of the gate.
- **Ready for Innovation:** We set up the ideal foundation for you to easily deploy future innovations, such as **Oracle APEX** applications or **Oracle Integration Cloud (OIC)** connections.
- **Seamless Support Transition:** Because we build the foundation, we know exactly how to support it. Your new environment plugs directly into our Enigized managed services for immediate monitoring.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Basic Foundation): Core setup for a single project; includes basic networking (VCN), user access controls (IAM), and standard security policies.	2-3 weeks
Medium (Standard Enterprise): Multi-project setup; includes segmented networking, hybrid connectivity (VPN to your office), and advanced security guardrails.	4-6 weeks
Enterprise (Complex / Regulated): Multi-region setup for large organizations; includes strict compliance rules, automated infrastructure deployment, and advanced disaster recovery preparation.	8-10+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your security/compliance objectives, assess your “AS IS” operational readiness, and identify transformational needs.
- **Review:** Define the “TO BE” Landing Zone architecture, develop a future-proofed cloud roadmap, and agree on Phase 1 delivery.
- **Innovate:** Deliver the foundational environment (network design, security implementation, testing, deployment) for seamless integration.
- **Validate:** Assess security effectiveness, review the approach against compliance goals, and document wins to validate your cloud strategy.
- **Evolve:** Expand the Landing Zone to accommodate new business units and adapt to evolving cloud security trends.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
