

MULTICLOUD

Solution Overview

Connect Oracle Cloud Infrastructure (OCI) seamlessly with your existing cloud environments, such as Microsoft Azure, AWS, or Google Cloud (GCP). We help you run each workload on the best cloud provider while maintaining secure, low-latency data flow and unified management across your entire cloud estate.

Key Differentiators

- **Cross-Cloud Integration:** We use **Oracle Integration Cloud (OIC)** to connect applications and data streams running across OCI, Azure, AWS, and GCP.
- **Workload Optimisation:** Place your databases where they run best (such as Oracle Autonomous Database on OCI) while keeping application front-ends in your primary cloud of choice.
- **Unified Front-Ends:** Rapidly build single-pane-of-glass dashboards and interfaces across your multicloud environment using **Oracle APEX**.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Cross-Cloud Connectivity): Set up secure, low-latency interconnectivity between OCI and one other public cloud provider (e.g., Azure or AWS); includes basic landing zone setup.	3-4 weeks
Medium (Multicloud Integration): Connect cross-cloud databases and applications using OIC, automate data transfers, and configure basic cross-cloud monitoring.	6-8 weeks
Enterprise (Full Multicloud Architecture): Complex multi-cloud estate (e.g., Oracle Database@Azure or Oracle Database@AWS), unified identity management, and custom APEX control portals.	10-12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand key business objectives, assess your “AS IS” multi-vendor cloud state, and document key networking challenges.
- **Review:** Define the “TO BE” cross-cloud architecture, work on ROI for workload placement, and agree on Phase 1 delivery.
- **Innovate:** Full life-cycle delivery of the multicloud interconnect (design, networking implementation, testing, deployment).
- **Validate:** Assess interconnect performance, review latency/efficiency KPIs, and ensure seamless integration across cloud environments.
- **Evolve:** Expand the multicloud footprint to unlock additional value, strengthening the roadmap with new vendor capabilities and trends.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
