

NON-ORACLE TO ORACLE MIGRATION

Solution Overview

Move your non-Oracle workloads—whether from on-premises servers or other cloud providers like AWS and Azure—onto Oracle Cloud Infrastructure (OCI). We help you transition databases, applications, and business processes securely, cutting infrastructure costs and improving performance under a single, unified cloud ecosystem.

Key Differentiators

- **Rebuild & Modernise:** Instead of just moving outdated third-party software, we can rebuild aging non-Oracle applications natively on OCI using low-code **Oracle APEX**.
- **Seamless Re-Wiring:** As you move systems to Oracle, we use **Oracle Integration Cloud (OIC)** to quickly reconnect your new OCI environment with your remaining business tools.
- **Cost & Vendor Consolidation:** Simplify your IT landscape and reduce licensing complexities by bringing fragmented workloads into a single, cost-effective Oracle architecture.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Lift & Shift): Migrate 1–2 non-Oracle workloads (e.g., standard VMs or basic databases) to OCI; includes standard networking and security setup.	3–4 weeks
Medium (Replatform & Reconnect): Migrate a core non-Oracle application/database (e.g., SQL Server to Oracle DB); includes data mapping and basic OIC integrations.	6–8 weeks
Enterprise (Full Transformation): Large-scale exit from another cloud or on-prem environment to OCI; includes complex OIC rewiring and rebuilding custom apps via APEX.	10–14+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your objectives, assess your “AS IS” non-Oracle technology stack, and identify architectural improvements.
- **Review:** Define the “TO BE” OCI architecture, justify the long-term strategy and consolidation ROI, and agree on Phase 1 delivery.
- **Innovate:** Deliver the migration lifecycle (re-platforming design, implementation, testing, deployment) with focused change management.
- **Validate:** Assess system performance post-migration, ensure smooth customer adoption, and validate the success of the digital transition.
- **Evolve:** Expand OCI native services to unlock additional value from your newly migrated workloads.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
