

ORACLE ANALYTICS

Solution Overview

Unlock actionable business insights with Oracle Analytics Cloud (OAC) and Fusion Analytics Warehouse (FAW / Fusion Data Intelligence). We transform raw enterprise data from Oracle SaaS, third-party applications, and OCI databases into real-time dashboards, predictive models, and self-service reporting.

Key Differentiators

- **Native Oracle SaaS Integration:** Leverage pre-built semantic models and pipelines to connect directly to Oracle Fusion ERP, CX, and SCM without complex ETL.
- **AI & Machine Learning Insights:** Harness embedded OCI AI capabilities for automated forecasting, anomaly detection, and natural language data queries.
- **Cross-Platform Analytics:** We combine **Oracle Integration Cloud (OIC)** and **Autonomous Data Warehouse (ADW)** to unify legacy third-party data alongside core Oracle metrics.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (OAC Essentials): OAC tenant setup, 2–3 standard executive dashboards, single data source connection (e.g., Oracle SaaS or ADW).	3–4 weeks
Medium (Fusion Analytics Warehouse): Implementation of pre-built FAW subject areas for ERP/CX/SCM + custom KPI development & ADW integration.	6–8 weeks
Enterprise (Cross-Enterprise BI & ML): Multi-source data lake/warehouse (ADW), complex OIC data pipelines, advanced AI/ML predictive analytics, and APEX reporting portals.	10–12+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your data objectives, analyse your “AS IS” reporting state, and document key data challenges and quick wins.
- **Review:** Define the “TO BE” analytics architecture, develop a future-proofed data roadmap, and agree on Phase 1 delivery.
- **Innovate:** Full life-cycle delivery of the analytics solution, from dashboard design to implementation and user deployment.
- **Validate:** Assess business value, validate data accuracy, and ensure strong user adoption for seamless integration into daily operations.
- **Evolve:** Expand analytics capabilities to unlock deeper insights and enhance the roadmap using emerging AI/ML trends.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
