

ORACLE APPLICATIONS TO OCI

Solution Overview

Migrate your on-premises Oracle applications (such as E-Business Suite, Siebel, PeopleSoft, JD Edwards, or Hyperion) to Oracle Cloud Infrastructure (OCI). We boost system performance, reduce hardware footprint, and lower total cost of ownership (TCO) while maintaining full business continuity.

Key Differentiators

- **Deep Oracle Expertise:** Proven track record in seamlessly migrating mission-critical Oracle application estates with zero loss of data integrity or custom logic.
- **Modern Integration & Extensions:** We leverage **Oracle Integration Cloud (OIC)**, and **Oracle APEX** to modernise legacy workflows and connect your applications directly to Oracle SaaS.
- **Enigized Support:** Seamless transition from migration to ongoing proactive monitoring, maintenance, and platform optimization.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Lift & Shift): Single Oracle app environment (e.g., EBS or Siebel); standard OCI VMs, landing zone & backup strategy setup.	4-6 weeks
Medium (Replatform): Core Oracle application stack + OCI Database Service migration, basic OIC integrations, DR setup.	8-10 weeks
Enterprise (Refactor / Hybrid): Multi-application Oracle estate; High Availability, complex OIC integrations, APEX extensions.	12-16+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your objectives, assess your “AS IS” Oracle Apps environment, and identify operational transformations.
- **Review:** Define the “TO BE” cloud architecture, work on ROI to justify the long-term strategy, and agree on Phase 1 delivery.
- **Innovate:** Deliver the full technological solution (design, implementation, testing, deployment) focusing on integration and change management.
- **Validate:** Review KPIs and solution performance for efficiency, ensuring seamless customer adoption and continuous improvement.
- **Evolve:** Expand your Oracle capabilities to address evolving needs, utilizing emerging OCI technologies and feedback.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
