

ORACLE DB MIGRATION AND CONSOLIDATION

Solution Overview

Migrate and consolidate your on-premises Oracle databases to Oracle Cloud Infrastructure (OCI). We help you move to modern database services—like Autonomous Database—to reduce hardware costs, manage your licenses effectively, and keep your systems running smoothly throughout the transition.

Key Differentiators

- **Smooth Transitions:** We use standard Oracle tools and straightforward methods to move your databases securely, keeping business disruption to a minimum.
- **App Modernisation:** Once your database is in the cloud, we can help you update or connect older applications using **Oracle APEX** and **Oracle Integration Cloud (OIC)**.
- **Cost & License Management:** We help you navigate Oracle licensing (such as Bring Your Own License) and consolidate your databases to lower your overall cloud running costs.

Commercial Tiers & Sizing

Scope / Tier	Implementation Duration
Starter (Simple Migration): Move 1–2 standard Oracle databases to OCI; includes basic setup and backup configuration.	3–4 weeks
Medium (Consolidation): Combine up to 5 databases into OCI Autonomous Database; includes standard migration and basic application connections.	6–8 weeks
Enterprise (Large Scale): Large-scale database moves to high-performance OCI services; includes advanced disaster recovery setup and complex integrations.	10–14+ weeks

Note: Final pricing, timelines, and scope depend on overall project scale, solution complexity, all stakeholder parties working collaboratively, and key prerequisites being in place.

Our Repeatable Delivery Framework (DRIVE)

- **Discover:** Understand your database objectives, analyse the “AS IS” database footprint, and identify consolidation opportunities.
- **Review:** Define the “TO BE” target architecture (e.g., Autonomous or Exadata), justify ROI on licensing, and agree on Phase 1 delivery.
- **Innovate:** Execute the database migration lifecycle (design, cutover, testing, deployment) ensuring zero-downtime integration.
- **Validate:** Assess database performance, review approach for continuous improvement, and validate the efficiency of the new architecture.
- **Evolve:** Expand the database solution to support new applications and enhance the roadmap based on feedback and scaling needs.

Our Managed Services Offering

Enigized delivers proactive platform management, continuous optimisation, and dedicated support for your Oracle Cloud environment. We ensure your systems remain secure, performant, and continuously aligned with evolving business needs.
